Marketplace Project Proposal

HTML / CSS / JavaScript Student Project

Submitted By:-Sudil Lohala,Kushal Chaudhary ,Aryan Singh, Prakrit Libi,Sambhav Phaiju,Bibek Shrestha,Samir Thapa

Student Web Developer

Introduction

The **Marketplace project** aims to create a user-friendly web platform that connects buyers and sellers, making online transactions accessible and straightforward for everyone.

Objectives

Clear Goals for Front-End Development

Responsive Design

Design a responsive web marketplace for all devices.

Intuitive User Interface

Create intuitive user interface for seamless navigation.

Key Functions

Implement key functions to enhance user experience.

Front-End Understanding

Enhance understanding of front-end development techniques.

Scope of the Project

User Registration

Provides a system for users to create accounts securely.

Product Listing

Enables sellers to easily upload and manage their products.

Search Functionality

Offers buyers the ability to find products efficiently.

Product Details

Displays comprehensive information about each product listed.

Shopping Cart

Simulates a cart experience for buyers during checkout.

Features

Functionalities Highlighted for Marketplace Project

User Registration

Allows users to create accounts for personalized experiences.

Product Upload

Sellers can list their products with detailed descriptions.

Browsing Products

Users can easily explore available items in the marketplace.

Search Options

Powerful filters help users find products quickly.

Conclusion

The **Marketplace project** effectively applies web development skills, providing a practical platform for users while offering valuable experience in HTML, CSS, and JavaScript integration.
